

Professional Statement — Foundations of Cybersecurity

Activity Context:

This activity asked me to draft a short professional statement for my cybersecurity portfolio — a brief introduction for potential employers covering my strengths, values, and interest in cybersecurity, and how those support an organization's security goals. This is meant to be revisited and refined as my skills grow throughout the program.

My Statement:

My name is Yussuf Muzzammil. I am passionate and enthusiastic about technology. I sometimes sit and guess how people pose a threat to systems and applications and try to find possible solutions or scenarios that could prevent those kinds of threats.

Key Concepts This Reinforced:

- ✓ A professional statement isn't just a formality; it's how employers form their first impression of who you are and what you value before they read anything else
- ✓ Thinking like an attacker (anticipating how systems could be misused) is a mindset worth developing early, not just a skill for later in the program
- ✓ This statement is a living document, it's expected to evolve as my knowledge deepens, not something to get "perfect" on the first attempt
